

## STENT DELIVERY SYSTEM WITH MEMBRANE

### ABSTRACT OF THE DISCLOSURE

A stent delivery system comprising a catheter. The catheter having a catheter shaft, and a balloon mounted thereto. A stent is disposed about at least a portion of the balloon. The stent having an unexpanded state and an expanded state. The stent being retained on the balloon in the unexpanded state by at least one sleeve. The at least one sleeve having a first portion engaged to the catheter and a second portion at least partially overlaying an end of the stent when the stent is in the unexpanded state. At least one membrane is disposed about a portion of the stent. The at least one membrane constructed and arranged to prevent portions of the stent thereunder from flaring out during advancement of the catheter.
